PRODUCT DATA SHEET

HOSE MANAGEMENT · OVERHEAD HOSE SUPPORT

GO FILL Hose Hanger Range

Moulded hose saddles that hang a delivery hose in a supported curve from an overhead support such as a hose mast, keeping it off the ground and away from tight kinks. Four sizes suit DN25 to DN50 hose, each supplied with a hanging strap and metal ring.

4	DN50	Italy
sizes in the range	largest hose, from DN25	country of manufacture

Key features

- Curved saddle carries the hose over a broad support, not a single pinch point.
- Four sizes to suit DN25 (1"), DN32 (1 1/4"), DN40 (1 1/2") and DN50 (2") hose.
- GO order code moulded into every saddle, so the size can be checked on site.
- Supplied with a hanging strap and metal triangle ring, ready to hang.
- GO Industrial logo moulded into the saddle.
- Made in Italy.

SELECTION AND USE

Choosing, using and ordering

Which size to fit

- Match the hanger to the nominal bore of the hose: DN25 (1") GO100ED, DN32 (1 1/4") GO125ED, DN40 (1 1/2") GO150ED, DN50 (2") GO200ED.
- The order code is moulded into the saddle, so an installed hanger can be matched to its hose at a glance.

Installation and use

- Hang the saddle by its strap and ring from a suitable overhead support, such as a hose mast.
- Seat the hose in the saddle so it runs in a smooth, supported curve on both sides.
- Use the hanger to support hose only. It is not a lifting point.
- Check the strap, stitching and ring at every service, and replace a worn or cut strap.
- For dimensions or application advice, contact sales@goind.com.au or 07 3204 2240.
