

APPLICATIONS – Citrus 6000

| | |
|----------------------------------|---|
| Floors | If using a bucket and mop – 1/2 cup to a bucket of warm water |
| Painted Walls | Better than sugar soap. Between 5:1 to 10:1 depending on how bad the soiling. |
| Decks | Use as a prep before oiling or just to clean. 10:1 is normally strong enough |
| House Exteriors | Can either be used as a spray – 20:1, or through pressure cleaner (PC). For professional house cleaners – Sierra recommends putting 2 litres of Citrus 6000 along with 2 litres of chlorine into an empty 20 litre container, then fill the remaining 16 litres with water. Apply this mixture through PC at up to 40:1 |
| Concrete | As above, but through PC at 20:1. Alternatively, if oil is present, then apply neat to worst areas, let dwell, and agitate with a brush. Then rinse with a PC. (note: oil will always leave a shadow) |
| Brickwork | Same as House Exteriors and Concrete |
| Public Areas | Usually 10:1 brushed or sprayed on, left to dwell for 2 minutes then rinsed off, for general cleaning of equipment – use a wash mix similar to “Floors” |
| Motorcycles | Great for cleaning dirt bikes. Use 3:1, spray directly to cooled engine and parts. Let dwell for a couple of minutes, then rinse off. If red dirt is present, agitate with a brush after spraying. Rinse as normal. Road bikes too. |
| Auto Detailing | Spot Cleaning Carpet & Fabric – 3:1. General interior 5:1 In all cases, let dwell for a minute or two first. Seats, console, dash, pedals, steering wheel and doors. Engine degreasing 1:1 to 3:1 |
| Fabric | Great as a pre spray before washing 3:1. Spray on, rub fabric against itself, and then wash. |
| Carpet | Normally spot clean 3:1. When used professionally – use at ¼ normal dilution. |
| Workshop Floors | Neat, agitate with a broom, then rinse. If using regularly, then dilute 10:1 |
| Marine | Seats (3:1 to 5:1), covers, decking 5:1 to 10:1) fish boards, 3:1 and agitate then rinse |
| Buses – Interior | 15:1 for all surfaces. Floors, seats, doors etc. Can be used to remove exhaust soot 10:1 |
| Hire Equipment | Varied – between 3:1 to 10:1. Removes soil, oil, soot, grease etc. |
| Truck Tautliners | 5:1 to 10:1 Spray on, agitate with a soft broom, rinse off. |
| Food Processing Equipment | as with Conveyer Belt cleaning. |
| Restaurants/Cafes | Very popular, because Citrus 6000 is food grade and will replace several chemicals into one – Spray & Wipe, floor cleaner, spot cleaner – chairs, walls. Splash Back cleaner for kitchen. |
| Pressure Cleaning | Extremely popular. Dosage varies according to job. Refer to House Exterior for general use |
| Property Management | Similar to Restaurants. Replaces so many other chemicals, and usually out performs as well. Food Grade is often important too. |
| Earthmoving | Cleans, degreases, removes red dirt staining. Cabin interior – same as auto interior |
| Mining Equipment | Same as auto interior. Again, because it is food safe, and yet so strong, very well accepted |
| Schools | Floors, walls, decking, bus interiors, exercise equipment (although not a sanitizer) |
| Child Care | Dilute 10:1 and very safe – walls, floors, equipment etc. |
| Caravans | All interior aspects of caravans. |
| Brake Dust | Easily removes brake dust. Spray 10:1, agitate with a soft brush, and hose off. |
| Outdoor Furniture | Spray all over at 10:1, let dwell for a couple of minutes, then hose or wipe off. |

The uses are endless. Often people want an exact dilution rate for a particular application. This is difficult because it depends on how bad the soiling is, the type of soiling, and how porous the surface is, so these are a guide.
