

Tint Adhesive Remover

Adhesive Reactant

Description

Tint Adhesive Remover effectively removes all residue left behind from Window Tint Film with no scrubbing.

Application

Application is best done using a spray applicator, set to medium coarse spray. Sierra Tint Adhesive Remover is still active when diluted up to 1:1 with water.

When sweating tint, first spray Tint Adhesive Remover liberally over the tint film. Then apply a black “sweating” panel on the inside of the tinted glass. When left in the sun for about half an hour to an hour, the tint film will normally lift easier than with no pre treatment at all. Once all tint film is removed, spray the Tint Adhesive Remover over the residue, allow to dwell for about 5 mins, then using a plastic scraper, scrape the soft gel like residue away. A final spray and clean may be necessary. Caution should be used when scraping rear windscreens, so as not to damage the demisting element.

Dilution / Package Size

Package size 5 Litre, 20 Litre, 200 and 1000 Litres

Typical Characteristics

| | |
|-------------------------|-----------------------|
| Appearance | Clear coloured Liquid |
| Solids content | 0.3% |
| Specific Gravity @ 25°C | 0.93 |
| Water Miscible | Yes in liquid state |
| Flash Point | Not applicable |
