

Deep Lustre

Polish

Description

Deep Lustre has been designed to produce high end shine and reflections to automotive paints and chrome. The soft slowing feel of application makes polishing a pleasure and fast process.

Deep Lustre contains no cutting agent, and so is safe on all paint finishes, providing the ultimate deep luster look.

Application

Prepare your surface before use by washing and claying (if required). Deep lustre can be applied to a dry or wet surface. Apply a dollop of Deep Luster to a microfiber cloth (or if using through a spray trigger spray 2-3 times direct into a microfiber towel). Apply to paint and with another clean microfiber towel gently buff off.

Dilution / Package Size

NA

Package size 1 Litre, 5 Litre, 20 Litre, 200 and 1000 Litres

Typical Characteristics

Typical pH:	NA
Specific Gravity:	1.19
Appearance:	Thick viscous gel
Colour:	Yellow
Non-hazardous, non-regulated	
Packaging:	Plastic Drums or IBC
