

# Polarstar

Film-backed abrasives

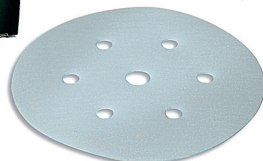

# Polarstar – for tackling the latest o

**MIRKA POLARSTAR.** As you'd expect from a world leader in abrasives technology, Polarstar is not your average sanding disc. It has been specifically developed to efficiently tackle the latest surface prep and repair applications. Polarstar uses a polyester film backing material (in contrast to paper) to create a more flexible and much smoother abrasive surface. As a result, Polarstar produces a finer, more consistent surface finish more quickly and, because it also has excellent resistance to clogging, it lasts longer, too.

## Add up the features and see how Polarstar can provide a more effective solution to your sanding needs:

- Outstanding performance on demanding applications such as hard tooling gelcoats and the latest scratch resistant automotive clearcoats.
- Manufactured using Mirka's unique, environmentally friendly solvent-free coating system.
- Unique abrasive material resists clogging and delivers long lasting performance.
- Designed for optimum performance on both wet and dry sanding.
- Excellent durability – retains its high performance sanding properties for far longer, especially on harder applications.

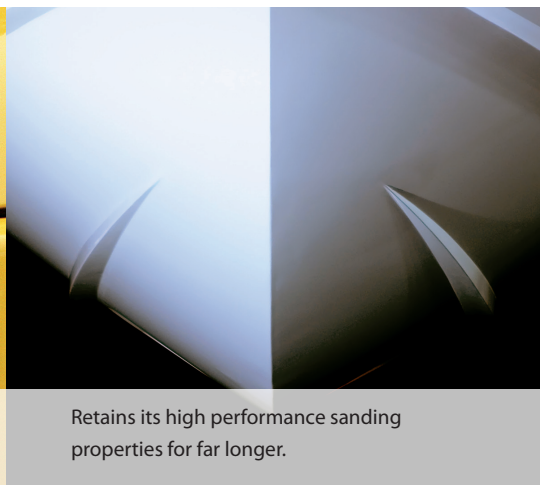

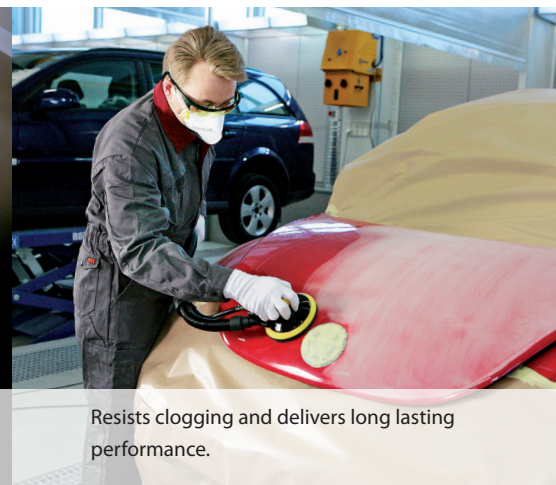

# demanding coating applications

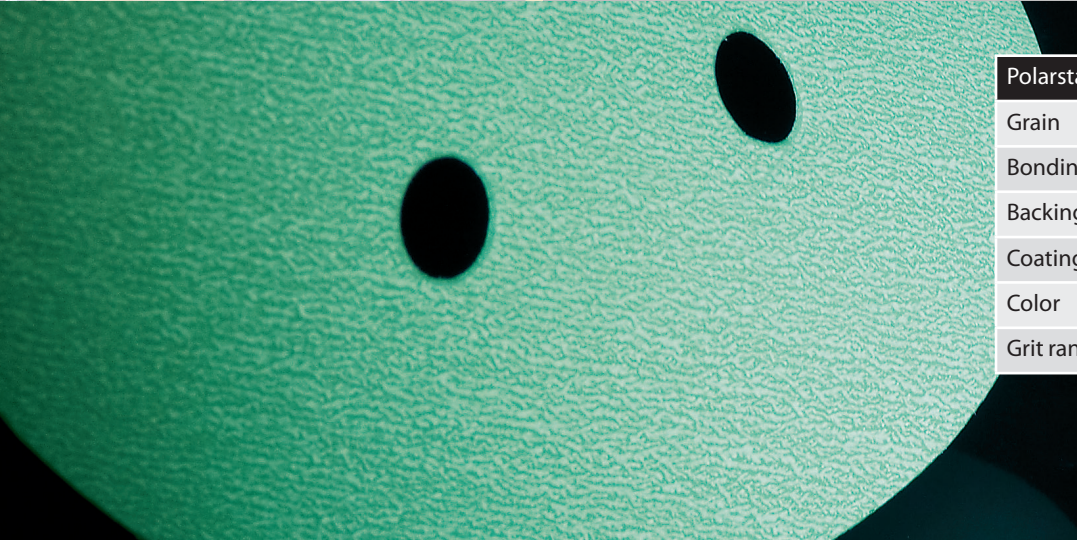

Optimum performance on both wet and dry sanding.

Retains its high performance sanding properties for far longer.

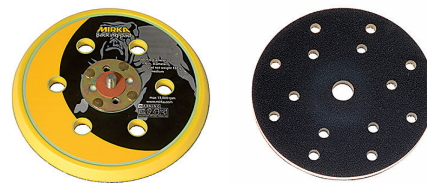

Resists clogging and delivers long lasting performance.

| Polarstar • Technical specifications |                               |
|--------------------------------------|-------------------------------|
| Grain                                | Silicon carbide               |
| Bonding                              | Resin over resin              |
| Backing                              | Polyester Film                |
| Coating                              | Semi-open                     |
| Color                                | Green / white                 |
| Grit range                           | P 800, P 1000, P 1200, P 1500 |

**POLARSTAR RANGE.** Another major advantage is the versatility of the range. With grades covering P 800, P 1000, P 1200 and P 1500, Polarstar is the ideal solution for a wide variety of tasks from paint rectification (P 1200 and P 1500) through to the surface conditioning of primer fillers and the repair of tooling gelcoats (P 800) in the marine and automotive sectors.

Optional tailor-made backing pad and interface pad can be used to achieve an even finer finish.

Finer abrasive grades provide an ideal pre-polish for Mirka's Polarshine polishing system.
